

Axis Add Ozak Turnstiles To Their Range

Axis Automatic Entrance Systems have announced the addition of Ozak Turnstiles, Passage Gates and Security Cylinder Gates to their range and to bring their quality, style and features to the UK market.

Ozak have been manufacturing turnstiles and gates since 1974. Custom based design facilities, an extensive range of standardised products, conformity to world quality standards, utilisation of cutting edge technology and excellent after sales service are fundamental to their strategic approach.

Products include wide ranges of full height turnstiles, waist height turnstile (sometimes referred to as half height) plus passage gates, speed gates and security cylinders. Styles vary from traditional to the aesthetic with the use of glass, acrylic and black granite . Arms can be motorised or pushed manually. All the Turnstiles

and Gates are easily integrated with access control systems. Operation can be managed either remotely, by coin, ticket, token or photo cell and Axis can provide cards and access tokens, printed membership or ID cards including signature strips, bar codes or magnetic strips and Mifare Classic encoding.

Passage Gates are an alternative to turnstiles and are ideal where users are carrying large pieces of luggage, perhaps pushing bicycles or require disabled access. Most or all of these might struggle with a rotating arm turnstile. Ozak Passage Gates can be an extremely effective solution and are available in single or double configurations and a variety of styles to suit all needs.

Ozak speed gates and optical turnstiles have been developed for commercial applications such as office lobbies and schools, where high numbers of people pass without restricting the freedom of movement but still employing a level of security and monitoring.

Axis MD Rob Brunero said “We are delighted to add the Ozak range to our portfolio. Their philosophy of conformity to world standards backed by an excellent service and flexible approach to finding the right solution is an excellent match to our own approach and we can already see tremendous opportunities for us both.”
